

## Chapter 20: Magnetic Properties

### ISSUES TO ADDRESS...

- What are the important magnetic properties?
- \_\_\_\_\_?
- How are magnetic materials classified?
- How does \_\_\_\_\_?
- What is superconductivity and how do magnetic fields effect the behavior of superconductors?

Chapter 20 - 1 

---

---

---

---

---

---

---

---

### Generation of a Magnetic Field -- Vacuum

- Created by current through a coil:

- Computation of the applied magnetic field,  $H$ :

$$H = \frac{NI}{\ell}$$

- Computation of the \_\_\_\_\_ in a vacuum,  $B_0$ :

$$B_0 = \mu_0 H$$

permeability of a vacuum  
 (1.257 x 10<sup>-6</sup> Henry/m)

Chapter 20 - 2 

---

---

---

---

---

---

---

---

### Generation of a Magnetic Field -- within a Solid Material

- A \_\_\_\_\_ field is induced in the material

- Relative permeability ( \_\_\_\_\_ )  $\mu_r = \frac{\mu}{\mu_0}$

Chapter 20 - 3 

---

---

---

---

---

---

---

---

### Generation of a Magnetic Field -- within a Solid Material (cont.)

- \_\_\_\_\_  $M = \chi_m H$   
Magnetic susceptibility (dimensionless)
- $B$  in terms of  $H$  and  $M$   $B = \mu_0 H + \mu_0 M$
- Combining the above two equations:

$\chi_m > 0$   
vacuum  $\chi_m = 0$   
 $\chi_m < 0$

$$= (1 + \chi_m)\mu_0 H$$

permeability of a vacuum:  
( $1.26 \times 10^{-6}$  Henry/m)

$\chi_m$  is a measure of a material's magnetic response relative to a vacuum

Chapter 20 -

---

---

---

---

---

---

---

---

### Origins of Magnetic Moments

- Magnetic moments arise from \_\_\_\_\_ and the spins on electrons.

electron orbital motion

electron spin

Adapted from Fig. 20.4, Callister & Rethwisch 8e.

- Net \_\_\_\_\_ :  
-- sum of moments from all electrons.
- Four types of response...

Chapter 20 - 5

---

---

---

---

---

---

---

---

### Types of Magnetism

(3) \_\_\_\_\_ e.g.  $Fe_3O_4$ ,  $NiFe_2O_4$

(4) ferrimagnetic e.g. ferrite( $\alpha$ ), Co, Ni, Gd  
( $\chi_m$  as large as  $10^6$ !)

(2) \_\_\_\_\_ ( $\chi_m \sim 10^{-4}$ )  
e.g., Al, Cr, Mo, Na, Ti, Zr

vacuum ( $\chi_m = 0$ )

(1) \_\_\_\_\_ ( $\chi_m \sim -10^{-5}$ )  
e.g.,  $Al_2O_3$ , Cu, Au, Si, Ag, Zn

Plot adapted from Fig. 20.6, Callister & Rethwisch 8e. Values and materials from Table 20.2 and discussion in Section 20.4, Callister & Rethwisch 8e.

Chapter 20 - 6

---

---

---

---

---

---

---

---

### Magnetic Responses for 4 Types

	No Applied Magnetic Field ( $H = 0$ )	Applied Magnetic Field ( $H$ )	
(1) diamagnetic			none <small>Adapted from Fig. 20.5(a), Callister &amp; Rethwisch 8e.</small>
(2) _____			random aligned <small>Adapted from Fig. 20.5(b), Callister &amp; Rethwisch 8e.</small>
(3) ferromagnetic			aligned aligned <small>Adapted from Fig. 20.7, Callister &amp; Rethwisch 8e.</small>
(4) _____			

Chapter 20 - 7

---

---

---

---

---

---

---

---

---

### Domains in Ferromagnetic & Ferrimagnetic Materials

- As the applied field ( $H$ ) increases the \_\_\_\_\_ domains change shape and size by movement of domain boundaries.

$B_{sat}$

Magnetic induction ( $B$ )

Applied Magnetic Field ( $H$ )

$H = 0$

- \_\_\_\_\_ with aligned magnetic moment grow at expense of poorly aligned ones!

Adapted from Fig. 20.13, Callister & Rethwisch 8e. (Fig. 20.13 adapted from O.H. Wyatt and D. Dew-Hughes, Metals, Ceramics, and Polymers, Cambridge University Press, 1974.)

Chapter 20 - 8

---

---

---

---

---

---

---

---

---

---

### Hysteresis and Permanent Magnetization

- The magnetic hysteresis phenomenon

Stage 3. Remove  $H$ , alignment remains! => \_\_\_\_\_ magnet!

Stage 4. \_\_\_\_\_,  $H_c$ . Negative  $H$  needed to demagnetize!

Stage 5. Apply  $-H$ , align domains

Stage 6. Close the hysteresis loop

Adapted from Fig. 20.14, Callister & Rethwisch 8e.

Chapter 20 - 9

---

---

---

---

---

---

---

---

---

---

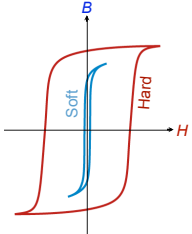

### Hard and Soft Magnetic Materials

         magnetic materials:

- coercivities
- used for permanent magnets
- add particles/voids to inhibit domain wall motion
- example: tungsten steel --  $H_c = 5900$  amp-turn/m)

         magnetic materials:

- coercivities
- used for electric motors
- example: commercial iron 99.95 Fe

Adapted from Fig. 20.19, Callister & Rethwisch 8e. (Fig. 20.19 from K.M. Ralls, T.H. Courtney, and J. Wulff, Introduction to Materials Science and Engineering, John Wiley and Sons, Inc., 1976.) Chapter 20 - 10

---

---

---

---

---

---

---

---

### Magnetic Storage

- Digitized data in the form of          are transferred to and recorded digitally on a magnetic medium (tape or disk)
- This transference is accomplished by a recording system that consists of a
  - "write" or record data by applying a magnetic field that aligns domains in small regions of the          medium
  - "read" or          data from medium by sensing changes in magnetization

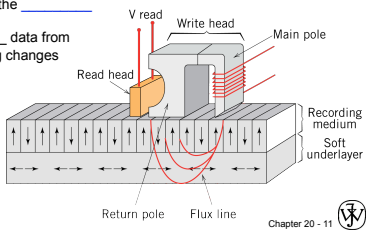

Fig. 20.23, Callister & Rethwisch 8e. Chapter 20 - 11

---

---

---

---

---

---

---

---

### Magnetic Storage Media Types

- Hard disk drives (         /perpendicular media):
  - CoCr alloy grains (darker regions) separated by oxide grain boundary segregant layer (lighter regions)
  - direction of each grain is perpendicular to plane of disk
- Recording tape (         media):
  - (needle-shaped) ferromagnetic metal alloy particles
  - Tabular (plate-shaped) ferrimagnetic barium-ferrite particles

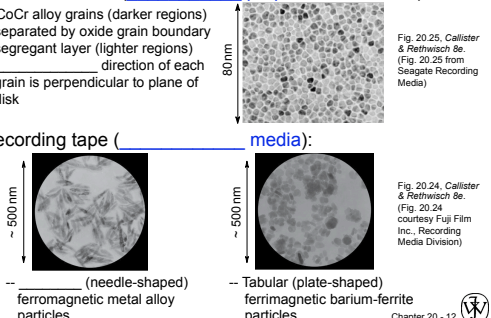

Fig. 20.25, Callister & Rethwisch 8e. (Fig. 20.25 from Seagate Recording Media)  
Fig. 20.24, Callister & Rethwisch 8e. (Fig. 20.24 courtesy Fuji Film Inc., Recording Media Division) Chapter 20 - 12

---

---

---

---

---

---

---

---

### Superconductivity

Found in 26 metals and hundreds of alloys & compounds

Mercury  
 Superconductor  
 Copper (normal)  
 Normal metal  
 Electrical resistivity  
 0  
 $T_C$   
 4.2 K  
 Temperature (K)

Fig. 20.26, Callister & Rethwisch 8e.

- $T_C$  = critical temperature  
= temperature below which material is superconductive

Chapter 20 - 13

---

---

---

---

---

---

---

---

### Critical Properties of Superconductive Materials

$T_C$  = \_\_\_\_\_ - if  $T > T_C$  not superconducting  
 $J_C$  = critical current density - if  $J > J_C$  not superconducting  
 $H_C$  = critical magnetic field - if  $H > H_C$  not superconducting

$$H_C(T) = H_C(0) \left( 1 - \frac{T^2}{T_C^2} \right)$$

Current density  $J$   
 $J_C (T = 0 \text{ K}, H = 0)$   
 $H_C (T = 0 \text{ K}, J = 0)$   
 $T_C (H = 0, J = 0)$   
 Temperature  $T$       Magnetic field  $H$

Fig. 20.27, Callister & Rethwisch 8e. Chapter 20 - 14

---

---

---

---

---

---

---

---

### Meissner Effect

- \_\_\_\_\_ expel magnetic fields

normal      superconductor

Fig. 20.28, Callister & Rethwisch 8e.

- This is why a \_\_\_\_\_ will float above a magnet

Chapter 20 - 15

---

---

---

---

---

---

---

---

### Advances in Superconductivity

- Research in \_\_\_\_\_ materials was stagnant for many years.
  - Everyone assumed  $T_{C,max}$  was about 23 K
  - Many theories said it was impossible to increase  $T_C$  beyond this value
- \_\_\_\_\_ - new materials were discovered with  $T_C > 30$  K
  - ceramics of form  $Ba_{1-x}K_xBiO_{3-y}$
  - Started enormous race
    - $YBa_2Cu_3O_{7-x}$   $T_C = 90$  K
    - $Tl_2Ba_2Ca_2Cu_3O_x$   $T_C = 122$  K
    - difficult to make since oxidation state is very important
- The major problem is that these ceramic materials are inherently brittle.

Chapter 20 - 16 

---

---

---

---

---

---

---

---

### Summary

- A magnetic field is produced when a current flows through a wire coil.
- **Magnetic induction (B):**
  - an internal magnetic field is induced in a material that is situated within an external magnetic field ( $H$ ).
  - magnetic moments result from electron interactions with the applied magnetic field
- Types of material responses to magnetic fields are:
  - **ferrimagnetic** and **ferromagnetic** (large magnetic susceptibilities)
  - **paramagnetic** (small and positive magnetic susceptibilities)
  - **diamagnetic** (small and negative magnetic susceptibilities)
- Types of **ferrimagnetic** and **ferromagnetic** materials:
  - **Hard:** large coercivities
  - **Soft:** small coercivities
- Magnetic storage media:
  - particulate barium-ferrite in polymeric film (tape)
  - thin film Co-Cr alloy (hard drive)
